.NET MAUI

WPF

Windows Forms

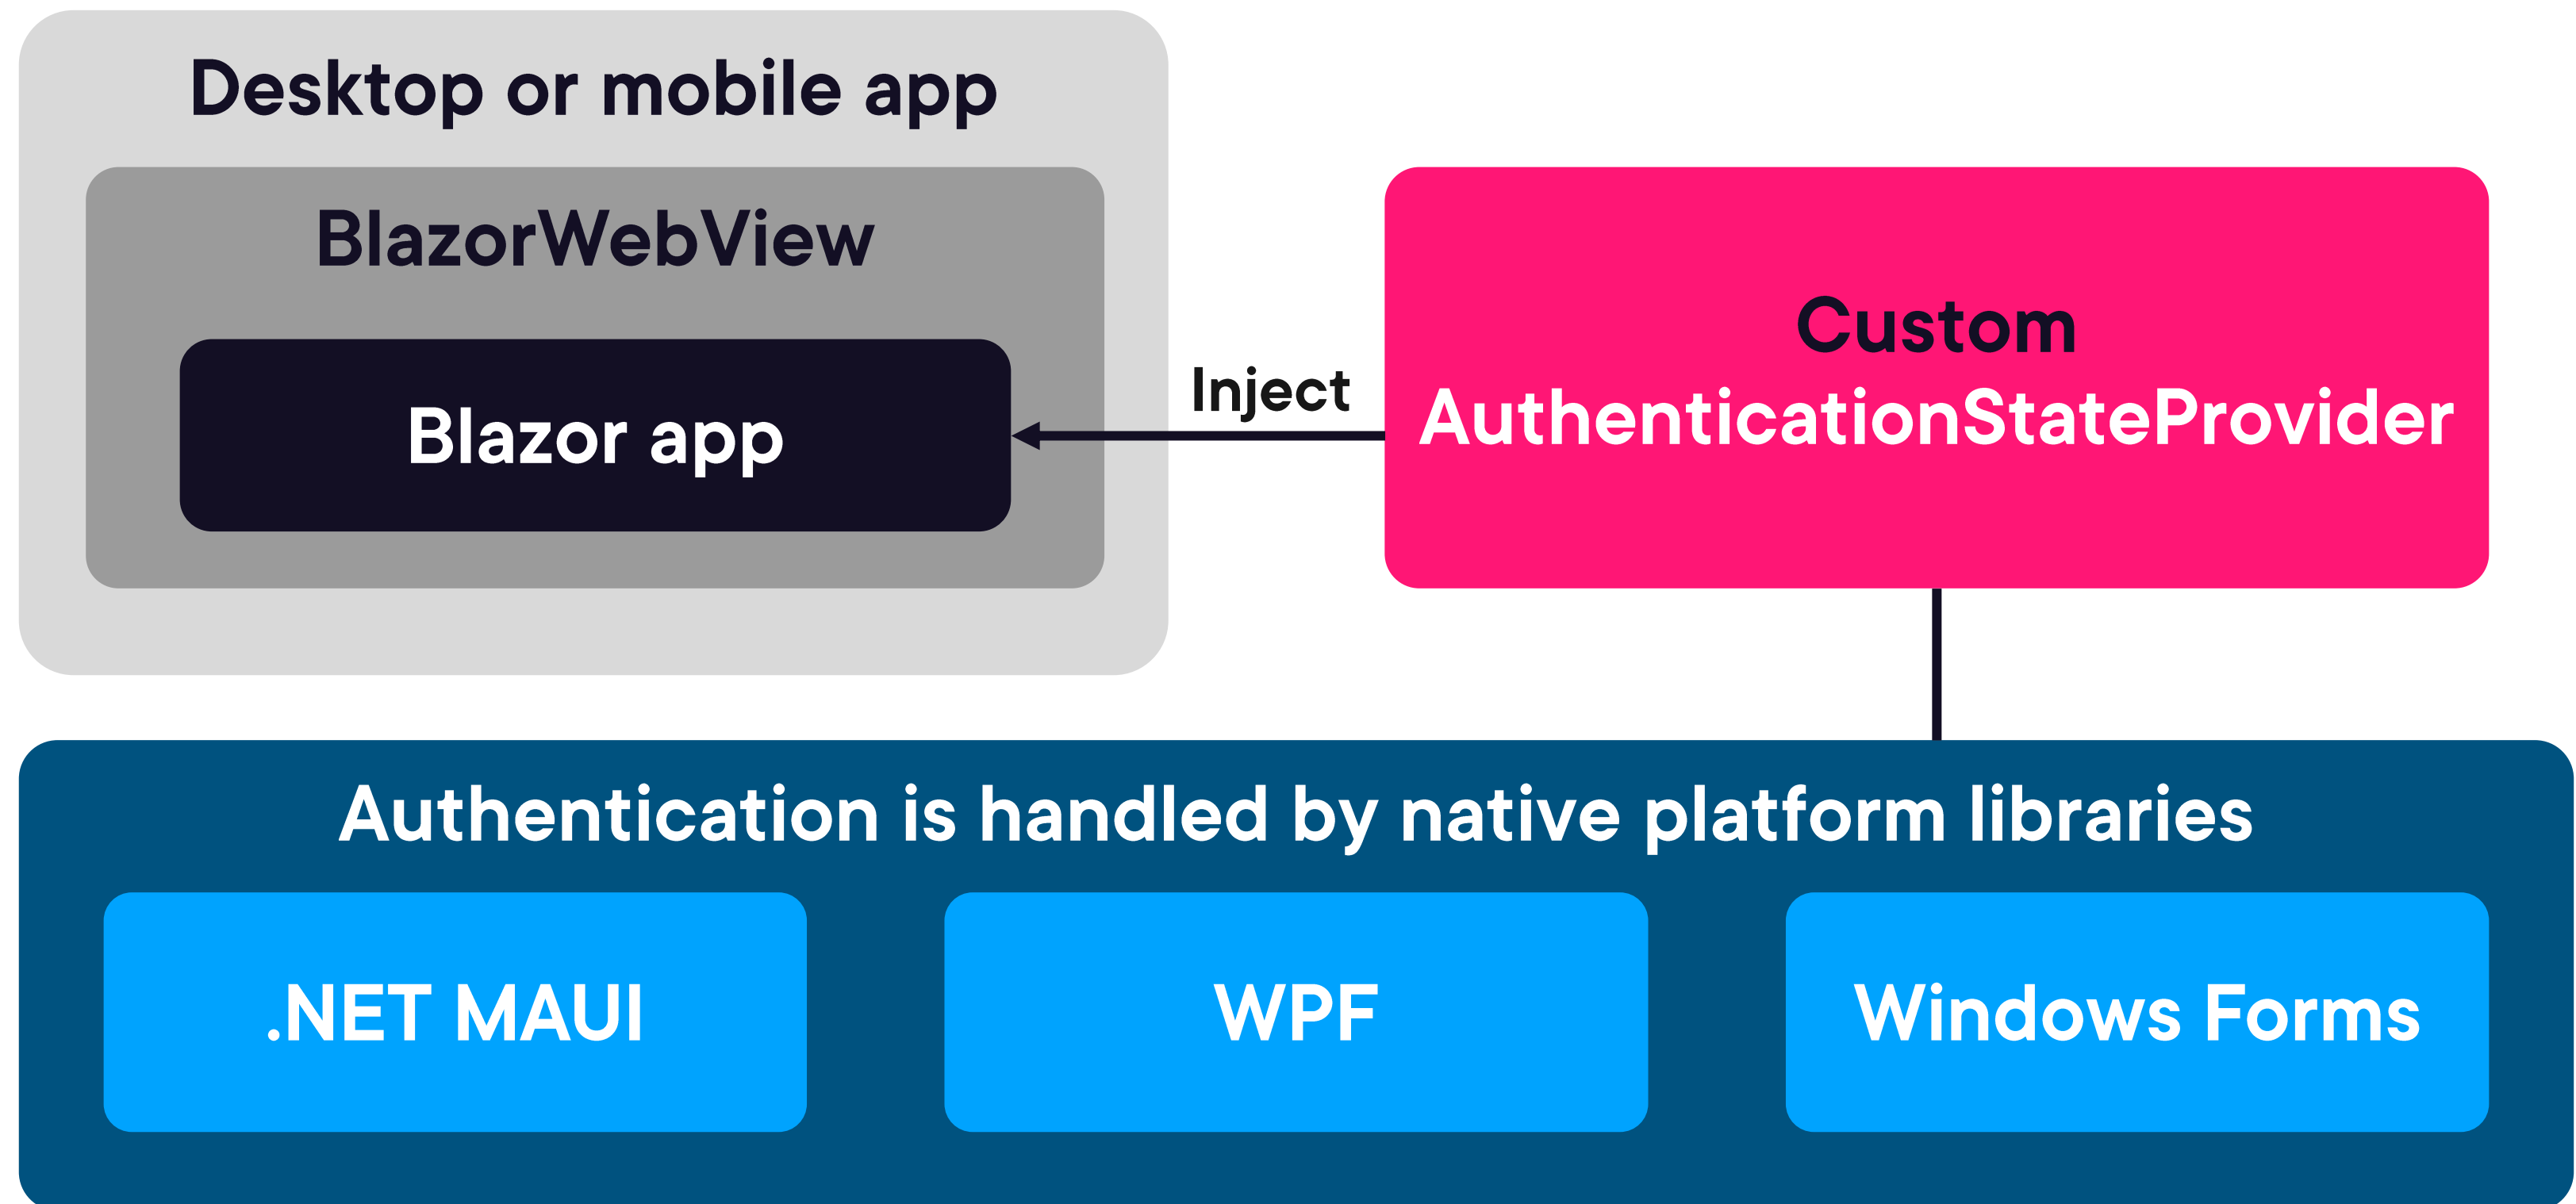

**Authentication determines
who the user is.**

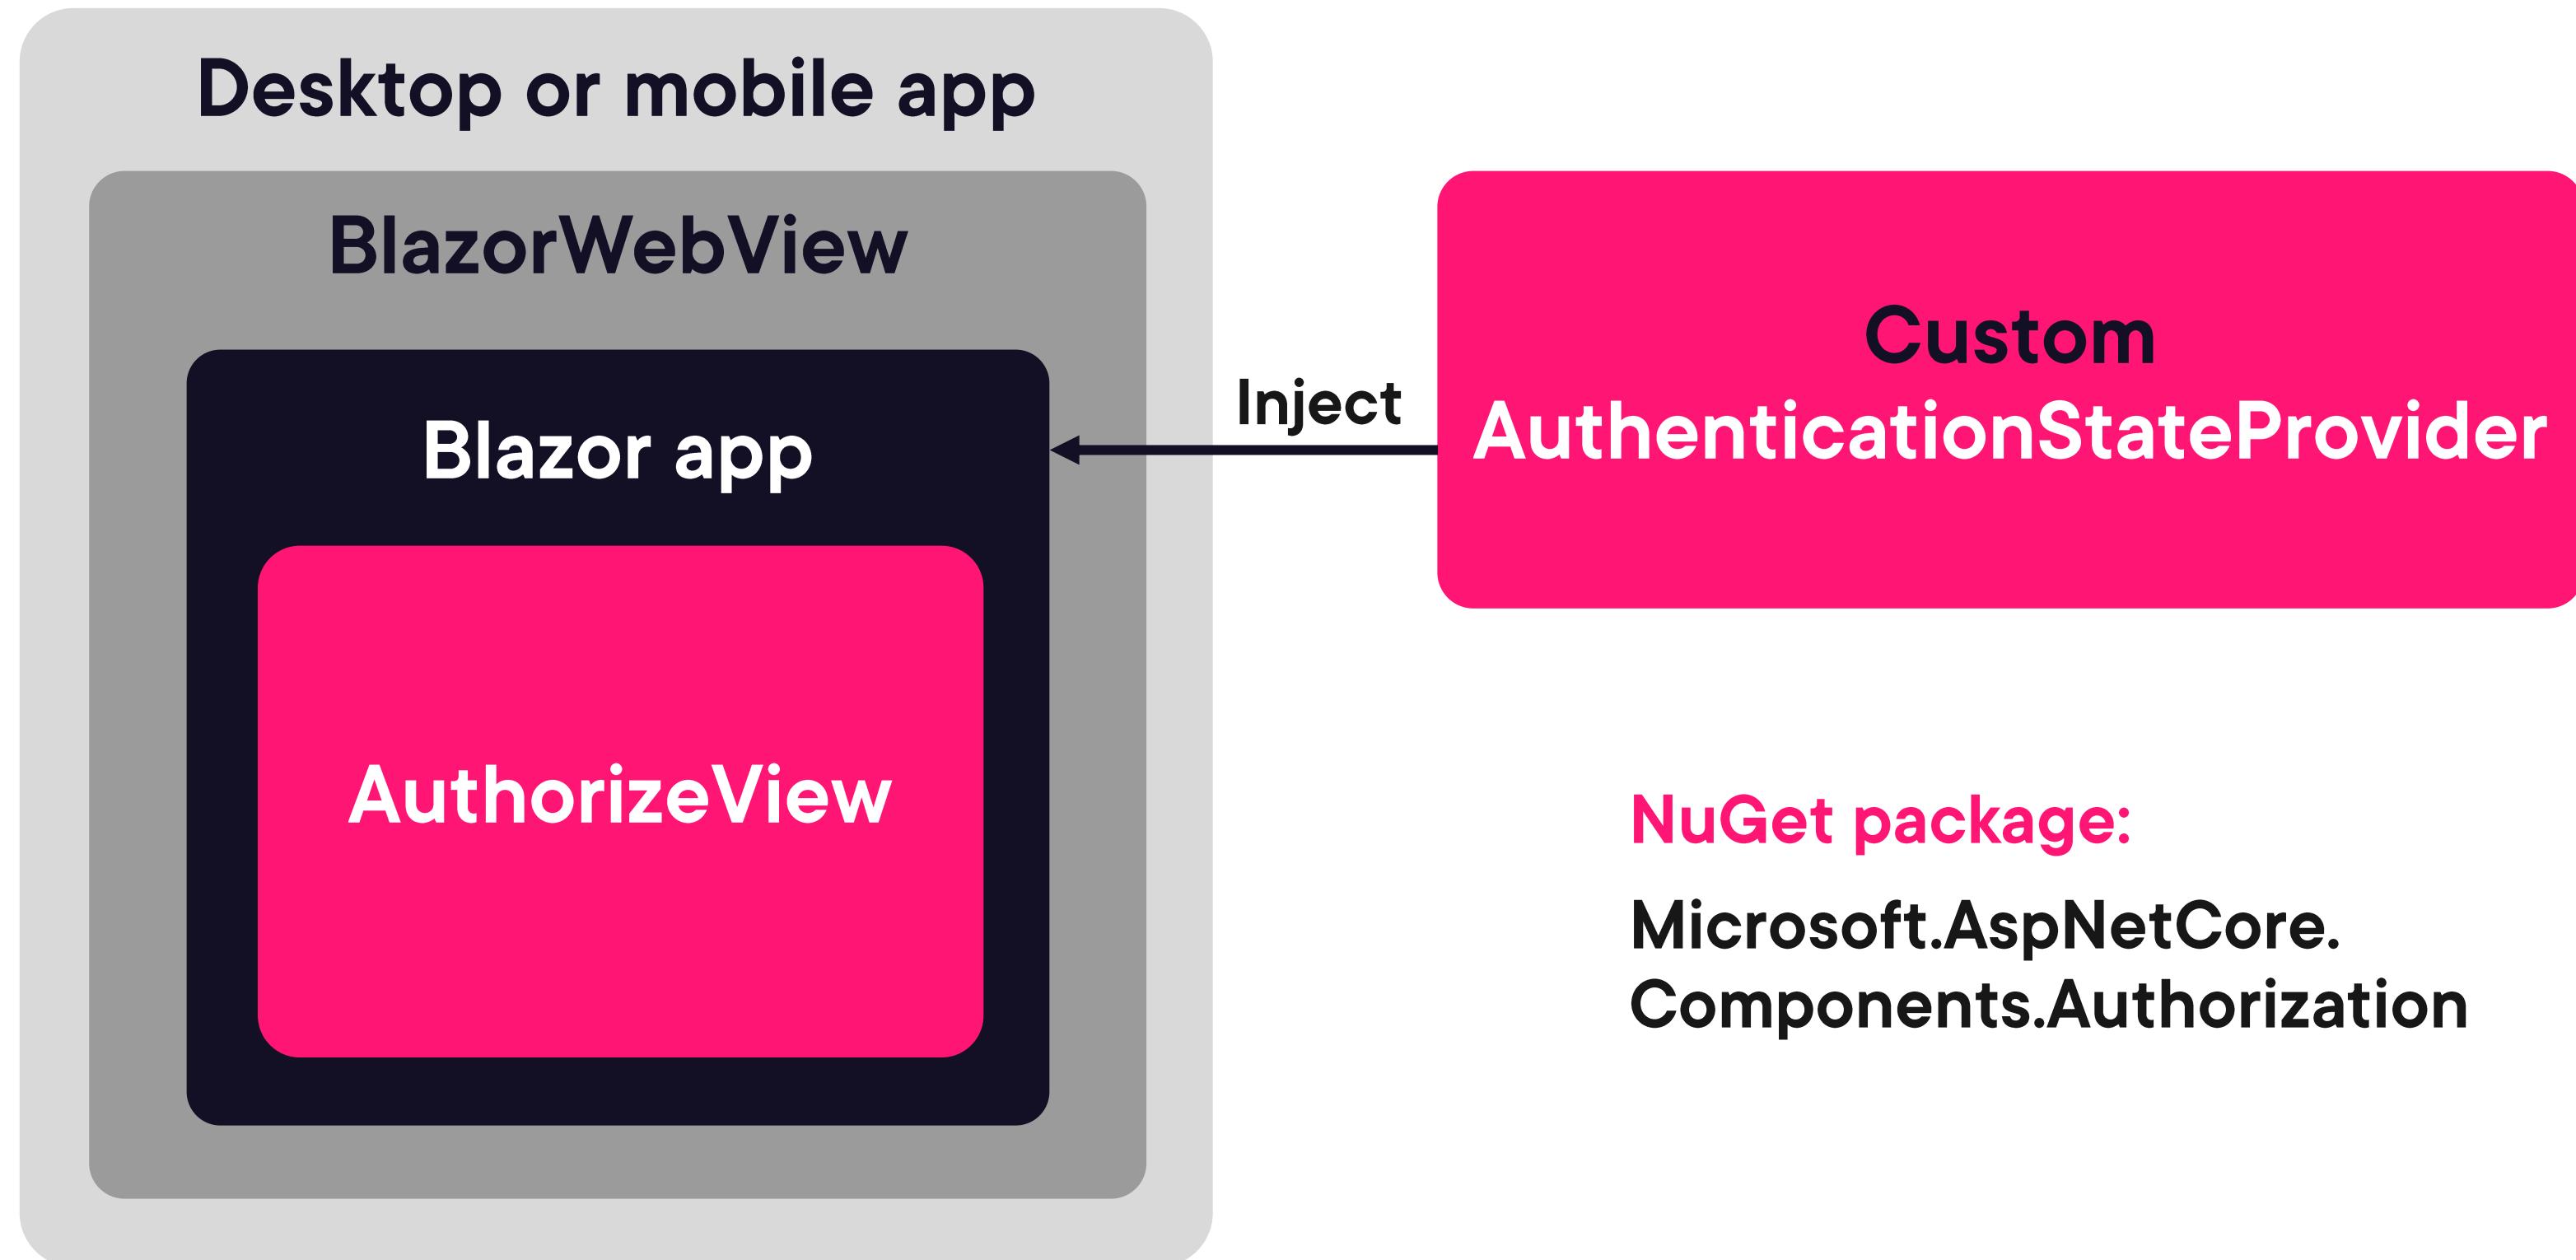

**Authorization determines
what the user can access.**

Understand Security in Blazor Hybrid

Understand Security in Blazor Hybrid

Create a custom AuthenticationStateProvider

Explore the CustomAuthstateProvider

Use the AuthorizeView

Add login and logout logic

Navigate to home after logging out

Use the Authorize attribute

Show the logged in user

Work with roles

Summary

Implement security in Blazor Hybrid

- Create an AuthenticationStateProvider
- Use the AuthorizeView
- Use the Authorize attribute

Add login and logout logic

Work with roles
